

## We offer services for your perishable freight with Temperature-Control Air Cargo Containers

### LIFE SCIENCES & PHARMACEUTICAL

GLCC understands that lives depend on the pharmaceutical supply chain and ensuring that life saving medications make it from the manufacturer to the patient is our highest honor. With a solid cold chain supply line to protect even the most sensitive treatments.

### SEAFOOD AND MEATS

With special sensors to control the temperature of your cargo from the moment it reaches our hands until we deliver it safely, we make sure that your load is kept at the proper temperature. Food products are among the most delicate of the supply chain. This is obvious for frozen and perishable foods, which have strict and detailed hygiene regulations.

### PRODUCE

Imports of fresh produce from Chile and Ecuador.

### FLORALS AND GREENS

Is there anything more important than a living being? Transport plants. It is a task that we are passionate about, because it gives us the opportunity to share the gift of life for the world. But life is something very delicate, which should be treated with the utmost professionalism and respect.

### CONFECTIONERY CARGO

Our organization's objective is to qualify the items we send overseas. We realize that we are representative of our client's global brand. If we do not properly pack the shipment for transit, ensure the documentation is accurate, the labels are correct and take other factors into consideration, we can potentially compromise their strategic objectives.

### INTERNATIONAL CATERING

Whether you're shipping the finished delicacy or the raw materials of a future delicious dessert, GLCC is prepared to move your cargo to an exacting degree. With GLCC, there are no more temperature excursions. You can see exactly what temperature journey your confection has had when you ship with GLCC.
